# New Mentoring Requirements for Graduate Students

## Mentoring Plans – NSF 24-1

- Submitted as component of proposal;
- No more than one page;
- Must describe mentoring to be provided to all postdoctoral scholars or graduate students supported by project;
- Separate plans not required for postdoctoral scholars or graduate students; plan may specify how different components will be enacted for the two types of researchers.

**Examples include, but are not limited to, careers, proposal preparation, publications, presentations, teaching, mentoring, collaborating in diverse teams, and responsible professional practices.**

# DEAR COLLEAGUE LETTER (DCL):

## Enhancing STEM Education, Research Capacity, and Workforce Development in Established Program to Stimulate Competitive Research (EPSCoR) Jurisdictions

NSF 24-077 | April 11, 2024

Through this DCL, EDU encourages new proposal submissions to EDU programs and supplemental funding requests to existing EDU awards led by institutions in the 28 EPSCoR jurisdictions. In order to achieve this, EDU seeks increased accessibility to the ideas, opportunities, and tools of STEM education and research for students, educators, researchers, communities at all levels and in all settings (both formal and informal), and by the public in EPSCoR jurisdictions, which historically receive less STEM education funding than other regions of the country.

STEM TECHNOLOGY ENGINEERING MATH  
EDUCATION

## **CEOSE Special Report that includes:**

- a description of past and present policies and activities of the Foundation to encourage full participation of students in rural communities in STEM fields;
- 

- an assessment of trends in participation of rural students in prekindergarten through grade 12 in Foundation activities; and,
- 

- an assessment of the policies and activities of the Foundation, along with proposals for new strategies or the broadening of existing successful strategies, to increase participation in Foundation STEM activities.
- 

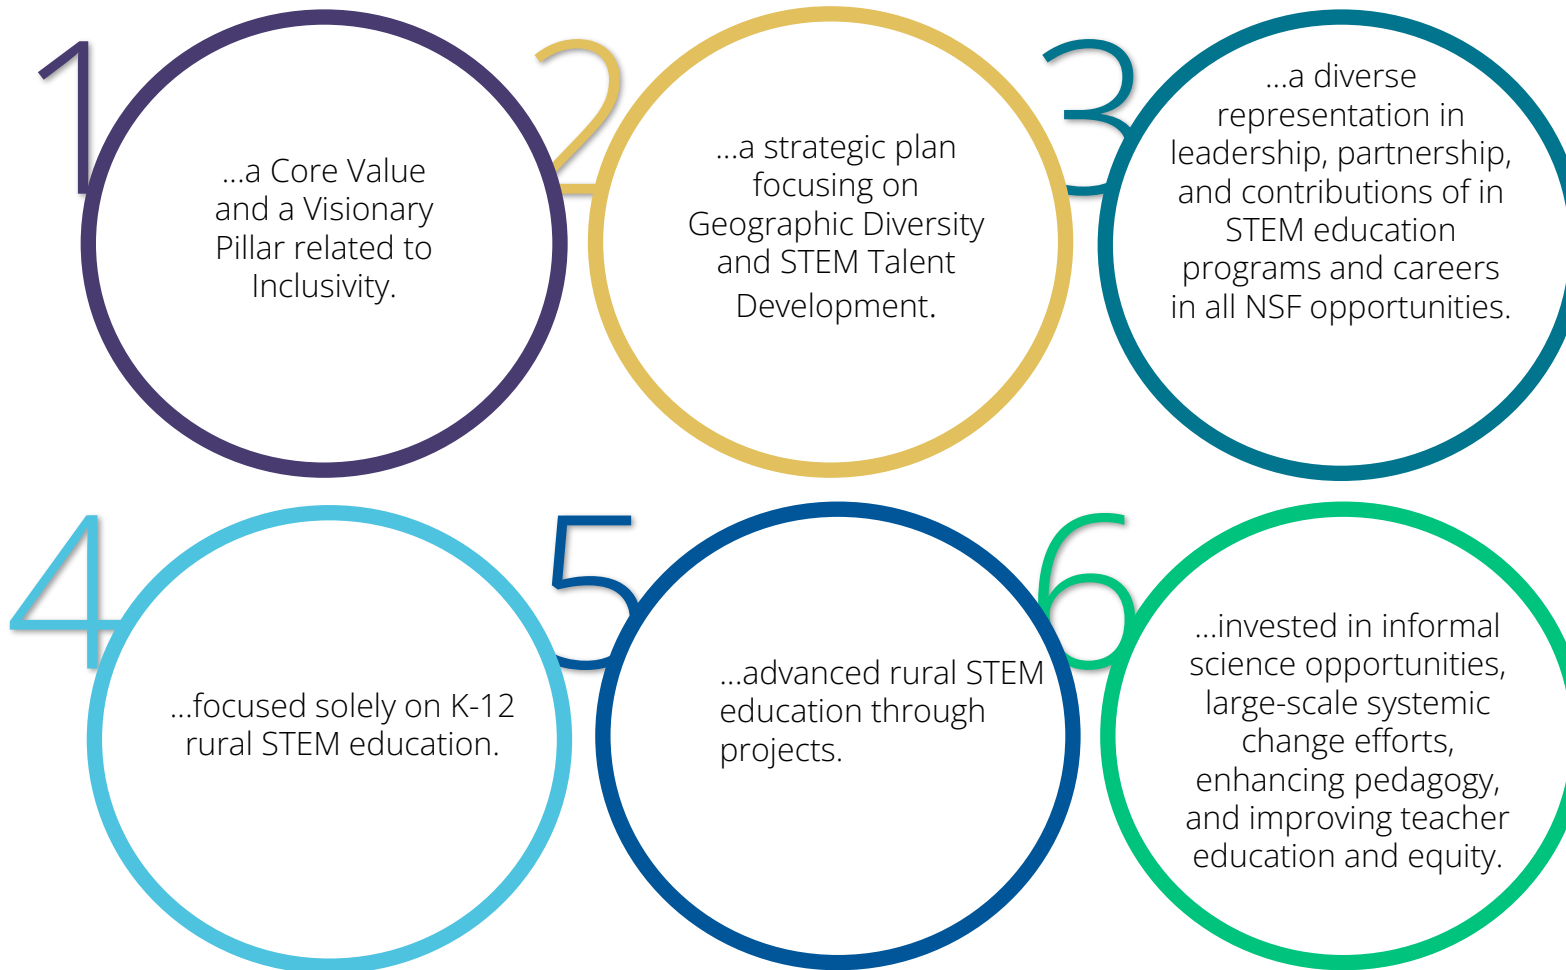

# PAST, PRESENT POLICIES AND ACTIVITIES

	Informal Science Education	Systemic Reform/Change Initiatives	Culturally Responsive Pedagogy	Teacher Education and K-12 STEM Career Development
PAST	ISE	RSI, MPS	CLT, IMD	TE, TCP, MSP
PRESENT	AISL	AISL, NSF EBJ INCLUDES	AISL, DRK-12, ITEST, CSforALL	AISL, NOYCE, TSETS

# PAST, PRESENT POLICIES AND ACTIVITIES

## Tailwinds

- Success stories across the diverse sectors of rural populations
- Schools as community centers
- Family involvement
- Place-Based learning
- Dual enrollment programs
- Natural resources
- Strategic partnerships
- Projects leading to economic development
- Informal STEM learning

## Headwinds

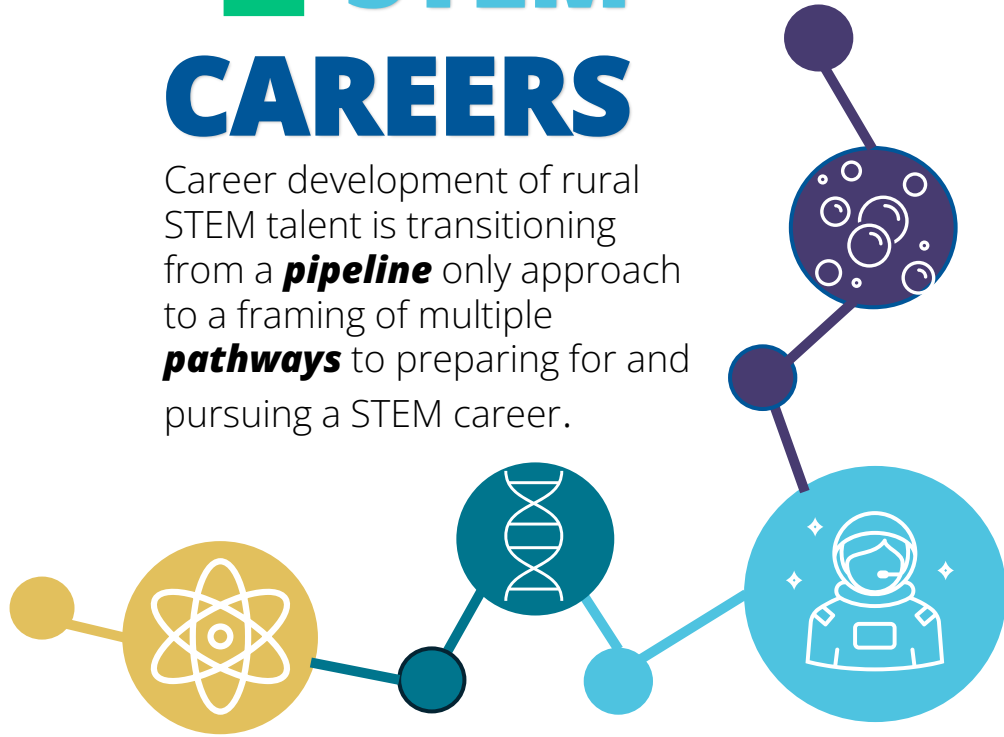

- Demographic cliff
- Broadband internet availability
- School choice
- Admission policies
- Lag in student achievement
- Under-resourced

# FOUR TRENDS IN K-12 STUDENT PARTICIPATION

## 4 STEM CAREERS

Career development of rural STEM talent is transitioning from a **pipeline** only approach to a framing of multiple **pathways** to preparing for and pursuing a STEM career.

### 1 PARTNERING RELATIONSHIP

Several different types of **partnering relationships** have emerged over time.

### 2 REMOTE STEM EDUCATION

Research has increased regarding **remote STEM education**.

### CUTTING-EDGE OPPORTUNITIES

NSF is supporting a wide range of **cutting-edge opportunities** for increasing and strengthening the STEM learning experience at the K-12 level.

# 3

# Overall Assessment of NSF Policies and Activities

a genuine commitment for agency policies and practices to be **inclusive** of rural communities.

a **longstanding history** of varied K-12 activities for K-12 students and teachers in rural school.

a division/directorate leading efforts to ensure that NSF has a **significant** rural STEM education portfolio.

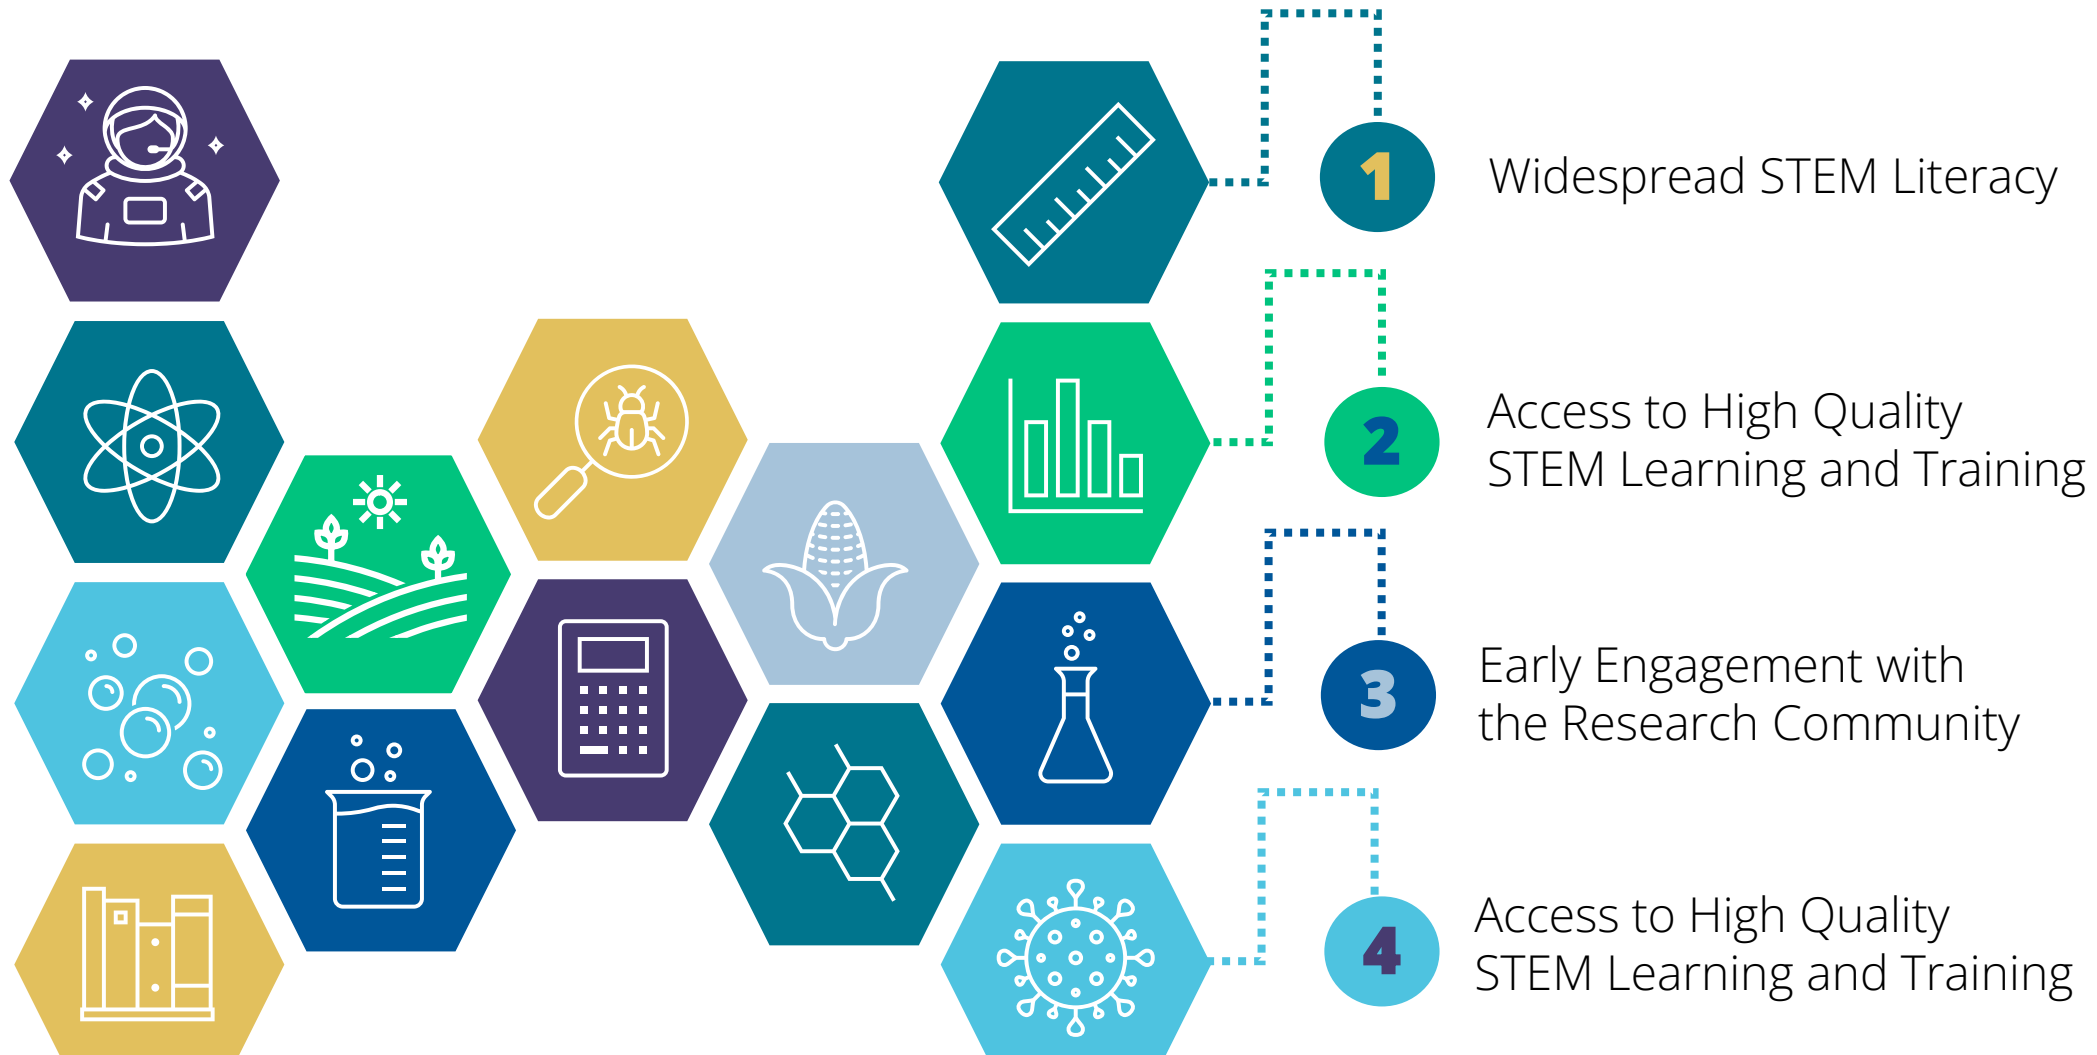

a need for increased funding to address **inequities** and **disparities** among rural communities to:

- continue and replicate successful practices and
- support innovative efforts that transform challenges into promising and innovative opportunities to help rural K-12 students excel in STEM education.

# SUGGESTIONS ALIGNED WITH NSF OBJECTIVES

# Q&A

MAKING **VISIBLE** the INVISIBLE:  
STEM Talent of **Rural** America  
*2024 CEOSE Report to Congress*

# K-12 STEM Education and Workforce Development in Rural Areas

National Academies Consensus Study

**CHIPS+ Science Act**  
**directed NSF to support**  
**National Academies to conduct**  
**a consensus study on**  
**preK-12 rural STEM education and workforce**  
**development**

# The National Academies will

1. **evaluate the quality and quantity of current federal programming and research** directed at examining STEM education (in both formal and informal settings) for students in prekindergarten through grade 12 and workforce development in rural areas;
2. in coordination with the Federal Communications Commission, **assess the impact that the scarcity of broadband connectivity in rural communities, and the affordability of broadband connectivity, have on STEM and technical literacy** for students in prekindergarten through grade 12 in rural areas;
3. **assess the core research and data needed to understand the challenges rural areas are facing** in providing quality STEM education (in formal and informal settings) and workforce development, **as well as the assets embedded in these communities**;
4. **make recommendations for action at the federal, state, and local levels** for improving STEM education, including online STEM education, for students in prekindergarten through grade 12 and workforce development in rural areas (whenever possible, findings and recommendations for preK-12 STEM education and workforce development in rural areas will be disaggregated to identify and address regional, racial/ethnic, and economic variability); and
5. **make recommendations to inform the implementation of programs** in sections 10512 (“National Science Foundation Rural STEM Activities”) and 10513 (“Opportunities for Online Education”), **which include the National Science Foundation's funding** for rural STEM activities and online STEM education and mentoring in rural communities.

# PreK-12 STEM Education & Workforce Development in Rural Areas

## NATIONAL ACADEMIES will

1. evaluate the quality and quantity of current federal programming and research
2. assess the impact that the scarcity of broadband connectivity in rural communities, and the affordability of broadband connectivity, have on STEM and technical literacy
3. assess the core research and data needed to understand the challenges rural areas are facing, as well as the assets embedded in these communities;
4. make recommendations for action at the federal, state, and local levels for improving STEM education; and
5. make recommendations to inform the implementation of programs in sections 10512 (“National Science Foundation Rural STEM Activities”) and 10513 (“Opportunities for Online Education”), which include the National Science Foundation's funding for rural STEM activities and online STEM education and mentoring in rural communities.

# NSF's Directorate for STEM Education: Active awards on rural topics and in nonmetro locales

**Michael M. Rook, Ph.D.**

Program Evaluator, NSF/EDU/Office of the Assistant Director

May 29, 2024

# Defining “rural”: Census and OMB

**U.S. Census Bureau** defines “Urban” and “Rural” based on census block

- Urban areas are based on a minimum threshold of 2,000 housing units or 5,000 people.
- Rural areas encompass all areas outside an urban area (66.3 million or ~20% people live in rural areas as of 2020).

**U.S. Office of Management and Budget (OMB)** defines “Metro” and “Nonmetro” based on county

- Metro areas are based on counties within the commuting zones of urban entities with a minimum threshold of 50,000 people.
- Nonmetro areas encompass all outside a metro area or commuting zones (46 million or ~14% people live in nonmetro areas).

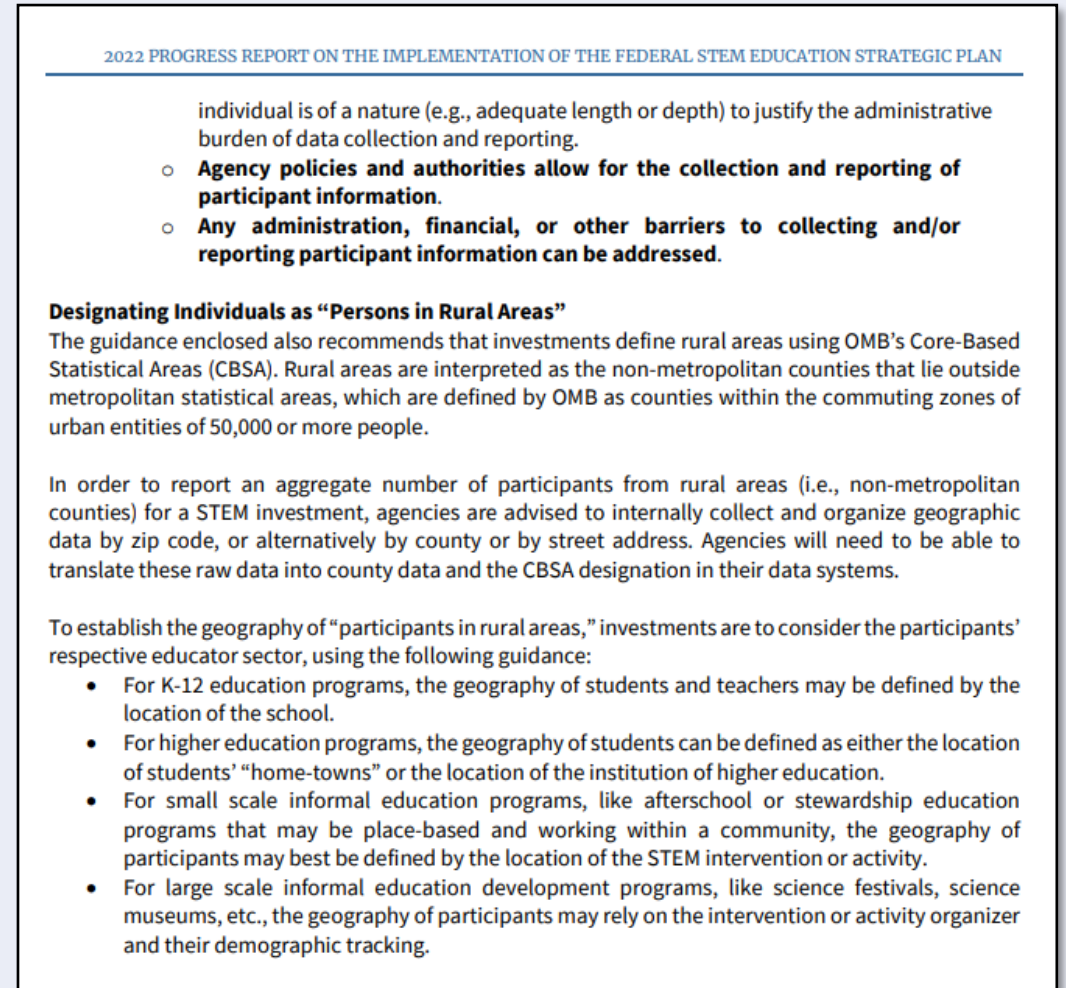

# Defining “rural”: National Science and Technology Council (NSTC)

The image shows the cover page of the NSTC 2022 Progress Report. At the top center is the NSTC logo, a circular emblem with a building facade. To its right, the word "Administration" is written in a small font. Below the logo, the date "JANUARY 31, 2023" is centered. The main title, "NSTC: 2022 Progress Report on the Implementation of the Federal STEM Education Strategic Plan", is prominently displayed in a large, dark blue serif font. Below the title is a horizontal navigation bar with icons and text for "OSTP", "NEWS & UPDATES", and "REPORTS AND DOCUMENTS". At the bottom, a line of text states: "NSTC: 2022 Progress Report on the Implementation of the Federal STEM Education Strategic Plan can be found [here](#) ↗."

<https://www.whitehouse.gov/ostp/news-updates/2023/01/31/nstc-2022-progress-report-on-the-implementation-of-the-federal-stem-education-strategic-plan/>

The image shows a page from the NSTC 2022 Progress Report. At the top, the title "2022 PROGRESS REPORT ON THE IMPLEMENTATION OF THE FEDERAL STEM EDUCATION STRATEGIC PLAN" is centered. Below the title, there is a list of bullet points. The first bullet point is partially visible, starting with "individual is of a nature (e.g., adequate length or depth) to justify the administrative burden of data collection and reporting." The second and third bullet points are: "Agency policies and authorities allow for the collection and reporting of participant information." and "Any administration, financial, or other barriers to collecting and/or reporting participant information can be addressed." Below the list, the section heading "Designating Individuals as “Persons in Rural Areas”" is followed by a paragraph of text: "The guidance enclosed also recommends that investments define rural areas using OMB’s Core-Based Statistical Areas (CBSA). Rural areas are interpreted as the non-metropolitan counties that lie outside metropolitan statistical areas, which are defined by OMB as counties within the commuting zones of urban entities of 50,000 or more people." Another paragraph follows: "In order to report an aggregate number of participants from rural areas (i.e., non-metropolitan counties) for a STEM investment, agencies are advised to internally collect and organize geographic data by zip code, or alternatively by county or by street address. Agencies will need to be able to translate these raw data into county data and the CBSA designation in their data systems." The final paragraph states: "To establish the geography of “participants in rural areas,” investments are to consider the participants’ respective educator sector, using the following guidance:" followed by a list of four bullet points: "For K-12 education programs, the geography of students and teachers may be defined by the location of the school.", "For higher education programs, the geography of students can be defined as either the location of students’ “home-towns” or the location of the institution of higher education.", "For small scale informal education programs, like afterschool or stewardship education programs that may be place-based and working within a community, the geography of participants may best be defined by the location of the STEM intervention or activity.", and "For large scale informal education development programs, like science festivals, science museums, etc., the geography of participants may rely on the intervention or activity organizer and their demographic tracking."

# Defining “rural”: National Science and Technology Council (NSTC)

Administration

JANUARY 31, 2023

## NSTC: 2022 Progress Report on the Implementation of the Federal STEM Education Strategic Plan

2022 PROGRESS REPORT ON THE IMPLEMENTATION OF THE FEDERAL STEM EDUCATION STRATEGIC PLAN

- individual is of a nature (e.g., adequate length or depth) to justify the administrative burden of data collection and reporting.
- **Agency policies and authorities allow for the collection and reporting of participant information.**
- **Any administration, financial, or other barriers to collecting and/or reporting participant information can be addressed.**

### Designating Individuals as “Persons in Rural Areas”

The guidance enclosed also recommends that investments define rural areas using OMB’s Core-Based Statistical Areas (CBSA). Rural areas are interpreted as the non-metropolitan counties that lie outside metropolitan statistical areas, which are defined by OMB as counties within the commuting zones of urban entities of 50,000 or more people.

*“Rural areas are interpreted as the non-metropolitan counties that lie outside metropolitan statistical areas, which are defined by OMB as counties within the commuting zones of urban entities of 50,000 or more people.”*

Education Strategic Plan can be found [here](#).

<https://www.whitehouse.gov/ostp/news-updates/2023/01/31/nstc-2022-progress-report-on-the-implementation-of-the-federal-stem-education-strategic-plan/>

To establish the geography of “participants in rural areas,” investments are to consider the participants’ respective educator sector, using the following guidance:

- For K-12 education programs, the geography of students and teachers may be defined by the location of the school.
- For higher education programs, the geography of students can be defined as either the location of students’ “home-towns” or the location of the institution of higher education.
- For small scale informal education programs, like afterschool or stewardship education programs that may be place-based and working within a community, the geography of participants may best be defined by the location of the STEM intervention or activity.
- For large scale informal education development programs, like science festivals, science museums, etc., the geography of participants may rely on the intervention or activity organizer and their demographic tracking.

# Investing in “rural”

**An award may be in a nonmetro locale, but an award (regardless of locale) also may be focused on specific populations or contexts, for example:**

- Rural population
- Rural context
- Focus on recruitment of rural participants
- Educational intervention for learners in rural locales
- Partnership among rural and urban institutions
- Pre- or In-Service teacher experiences in rural classrooms
- Wraparound support for learners from rural locales at urban institutions

In other words, investments with **Rural as a Topic** of interest.

# Awards with Rural as a Topic of interest

*All data as of May 1, 2024.*

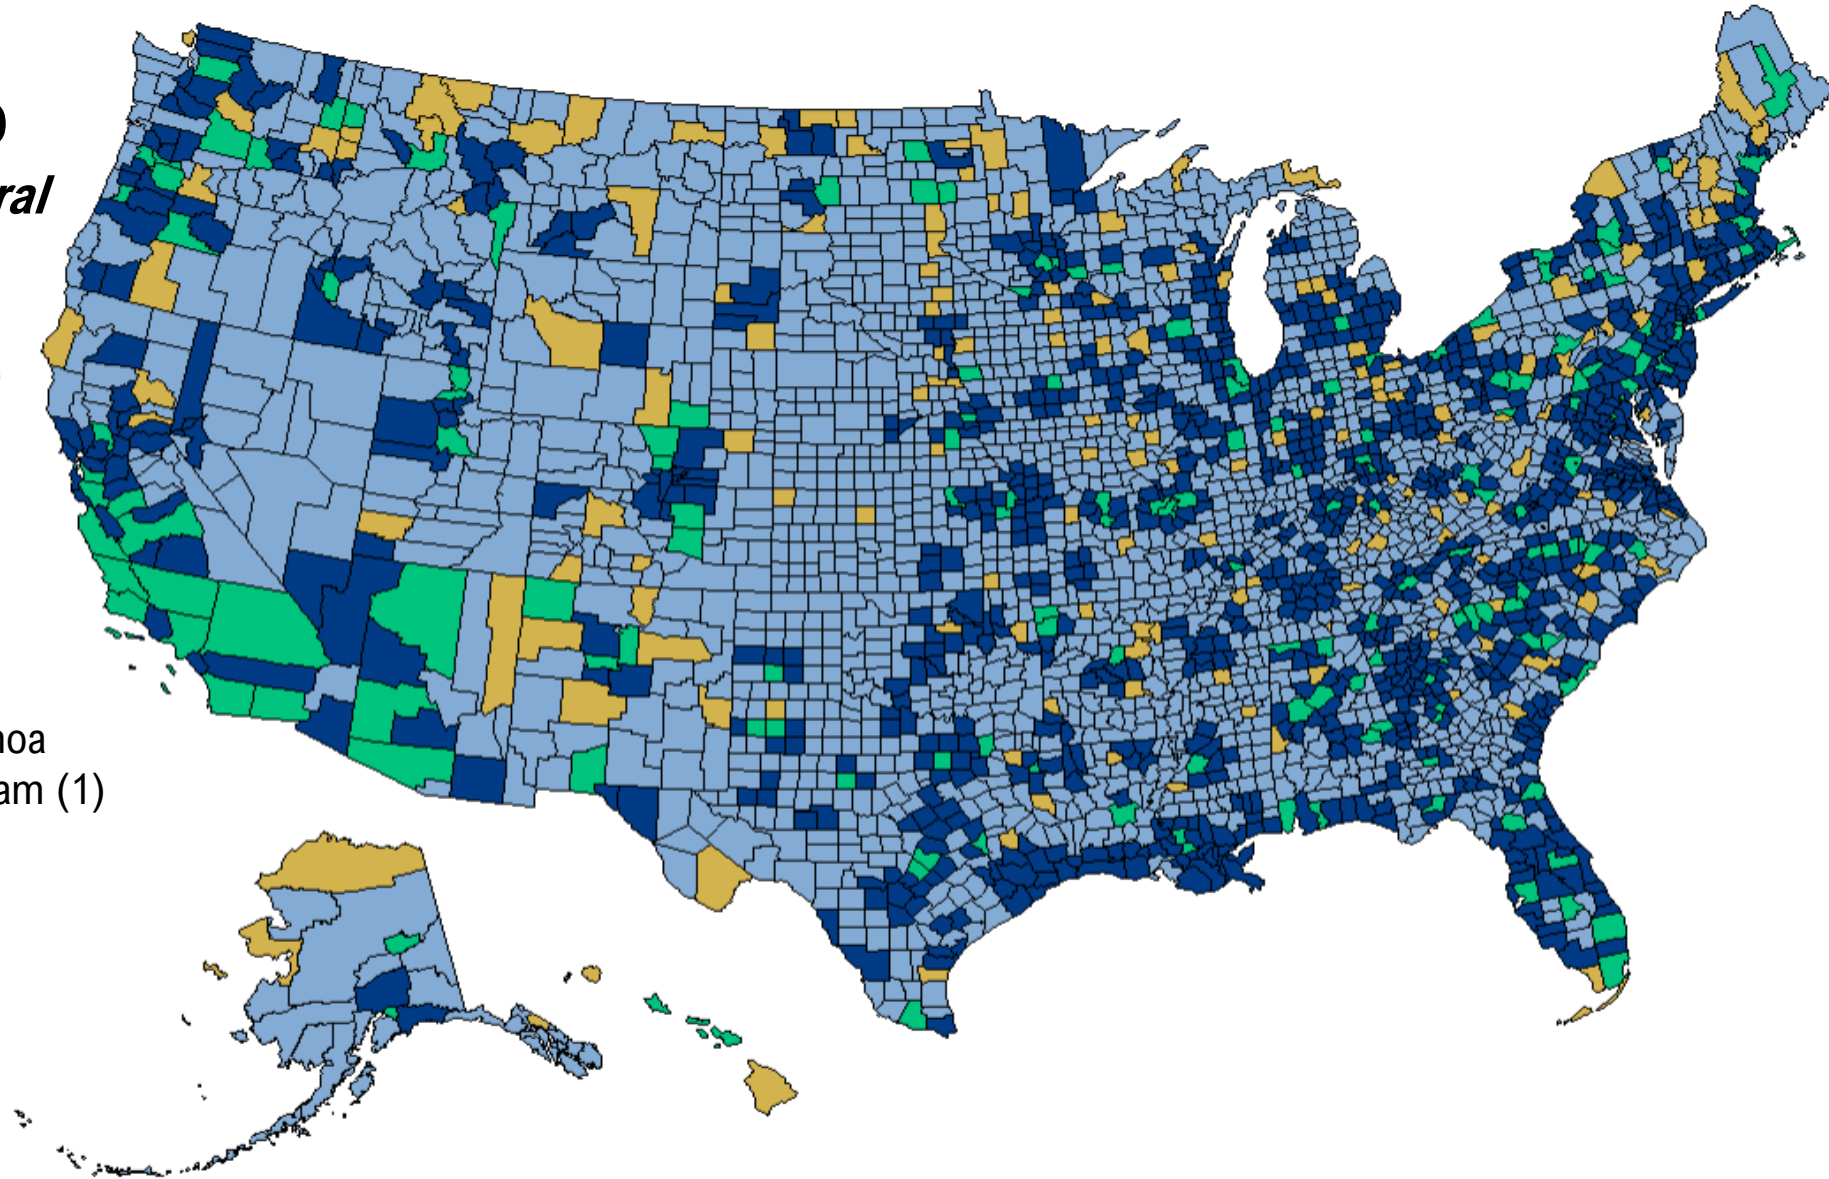

NSF's Directorate for STEM Education has 758 active awards on **rural topics**, in **nonmetro locales**, or in **both**.

# STEMulating the “M” in STEM (Award 2107520)

- **The overarching goal of the project:**
  - Recruit, prepare, develop, and retain African-American students at-risk for failure in math courses.
  - Increase interest in STEM by providing academic support during their matriculation from one critical transition (high school to 2-year institution) to the next through innovative teaching and learning strategies.

# STEMulating the “M” in STEM (Award 2107520)

## Objectives:

- **Objective 1:** To increase the math scores of high school students on state/ACT/Next Generation ACCUPLACER assessments
- **Objective 2:** To increase the success rates of students taking developmental/college level math courses through academic supports
- **Objective 3:** Strengthen the Math infrastructure at HCC - UTC to increase students' persistence in STEM

# Institutional Impact and Partnerships

- Campus math tutorials and math labs
- ACT workshops
- Title III and TRIO program partnerships
  - Upward Bound
  - Upward Bound Math and Science
  - Talent Search
  - Student Support Services
- Campus recruitment and retention

# Acknowledgements

- I would like to take time to acknowledge the entire NSF team. The Directorate of EDU, directorate and division leadership, program officers, and program staff.

Thank you!

## Essential Question:

What are some classroom goals that are significant to you?

- Explore and facilitate project based research activities for the math classroom that amplify student voice, creativity, and engagement
- Build equitable math learning spaces with the implementation of data science activities that incorporate technology and social justice topics
- Promote and empower students to nurture their analytical identities by promoting data literacy, a growth mindset toward problem solving and critical thinking

**SAN FRANCISCO  
STATE UNIVERSITY**

NCTM 2023 Annual Meeting & Exposition in Washington, DC

## Features of Social Justice Math

### Some Key Features of Teaching for Justice

1. Student agency: Students are involved in design and decision
2. Learning new skills: Students are developing new skills that they will be able to retain and apply in other circumstances.
3. Promoting Identity: Students are able to learn more about themselves, their heritage, and their contributions.
4. Promoting Diversity: Learning and recognitions of the experiences and assets of others.
5. Recognizes importance of life: Students engage in project that they believe will positively impact the state of life (humans, animals, plants)
6. Actionable: Students are able to see how the work they are doing can be put into action to make change.

@BootstrapWorld

# DIMENSIONS OF EQUITY

As equity-focused educators, it is important to distinguish between three key areas in education: *multicultural education*, *social justice education*, and *culturally responsive teaching*. Too often the terms are used interchangeably when they are not. Below is a simple chart to help you understand the distinctions between them. A key point to remember, only CRT is focused on the cognitive development of under-served students. Multicultural and social justice education have more of a supporting role in culturally responsive teaching.

<b>MULTICULTURAL EDUCATION</b>	<b>SOCIAL JUSTICE EDUCATION</b>	<b>CULTURALLY RESPONSIVE PEDAGOGY</b>
Focuses on celebrating diversity	Focuses on exposing the social political context that students experience	Focuses on improving the learning capacity of diverse students who have been marginalized educationally
Centers around creating positive social interactions across difference	Centers around raising students' consciousness about inequity in everyday social, environmental, economic, and political aspects of life	Centers around the affective & cognitive aspects of teaching and learning
Concerns itself with exposing privileged students to diverse literature, multiple perspectives, and inclusion in the curriculum as well as help students of color see themselves reflected.	Concerns itself with creating lenses to recognize and interrupt inequitable patterns and practices in society.	Concerns itself with building resilience and academic mindset by pushing back on dominant narratives about people of color.
<b>Social Harmony</b>	<b>Critical Consciousness</b>	<b>Independent Learning</b>

**Bisbee High School Breakfast Survey Class of 2024**

1) How many times did you eat breakfast at school this week?

2) Indicate the level that you agree or disagree about the following statement: **I have access to school breakfast.**

	1	2	3	4	5	
Strongly Disagree	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	Strongly Agree

3) Indicate the level that you agree or disagree about the following statement: **The cost of food offered at school is affordable.**

	1	2	3	4	5	
Strongly Disagree	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	Strongly Agree

4) Indicate the level that you agree or disagree about the following statement: **I am satisfied with the current breakfast schedule.**

	1	2	3	4	5	
Strongly Disagree	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	Strongly Agree

5) Indicate the level that you agree or disagree about the following statement: **I am satisfied with the quality of food served in the cafeteria.**

	1	2	3	4	5	
Strongly Disagree	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	Strongly Agree

6) What motivates you to eat breakfast at school? \*

How many people does this project impact?

**Bisbee Unified School District Board Meeting held on 12/12/23  
Student Presenters with Cafeteria Staff**

# HERALD/REVIEW

Published Friday, 12/15/23

## Bisbee High students survey on breakfast

Nothing is worse than providing food for breakfast only to have it tossed in the garbage, or to expect to get something to eat at the start of the school day, but find the cafeteria closed when buses run late. The bus that picks up students in Naco, Arizona, can have problems arriving on time.

BHS students want the cafeteria to offer breakfast a little later in the morning to avoid losing out. Others want it later so they can shake off the midmorning hunger pangs. Some may take items like fresh fruit or packaged snacks to put in their backpacks for later.

# Students Created their Own Experiments They took Ownership of their Learning Asked and Answered their Own Questions Gathered and Presented their Own Data Developed their Own Conclusions

## Student Voice

I know how I can make my lab better for next time.

I have ideas on how I can apply this to the world.

Can I take one home?

I enjoyed that.

Can we do that again?

I can't believe we made that.

I'm proud of my lab.

😊 that was Fun.

I actually wanted to finish this lab.

## Student Feedback:

As a member of Ms. Cross's CoStats class, I found this project to be very inspiring. For one of the first times in my life I watched my classmates genuinely want to engage in the discussions, share their theories, and play their part. I could tell that the majority was passionate about making some changes. Even students that generally choose not to engage in academics were into it, and even showed up to speak to the school board.

Promoting Rural Opportunities in STEM

# OVERVIEW

PRO-STEM, an exploratory project designed to investigate the key contributors, barriers, and challenges to choosing STEM coursework and degrees for rural, low income, and/or people of color.

This project used a community-based perspective and includes a mixed-method approach.

These results are designed to gain an understanding of the contributing factors related to STEM-based educational attainment in rural students of color.

- Phase 1 was to conduct key formative work to identify the barriers and resources to inform the development of engagement strategies for rural students to enter and remain in the STEM-educational pipeline.
- Phase 2 is to conduct a small pilot study to determine the feasibility and assess preliminary efficacy for a program designed to recruit students in STEM-based degrees (Program GO STEM [Gaining Opportunities in STEM]).
  - Program GO STEM a program is informed by a community advisory board and the students themselves, based on socioecological framework and includes education, enrichment activities, social support, and technology.

# RESEARCH ACTIVITIES

## STRUCTURED INTERVIEWS (N=15)

- County and state leadership about education-based infrastructure related factors including policy, funding, and opportunity. (Phase 1.1)
- Educators to explore capacity, opportunities, and resources related to STEM based education. (Phase 1.1)

## FOCUS GROUPS/LISTENING SESSIONS (N=~200)

- NCCU college students both rural and urban counties to assess experience, exposure, engagement, and barriers related to STEM coursework. (Phase 1.1)

## SURVEYS (N=306)

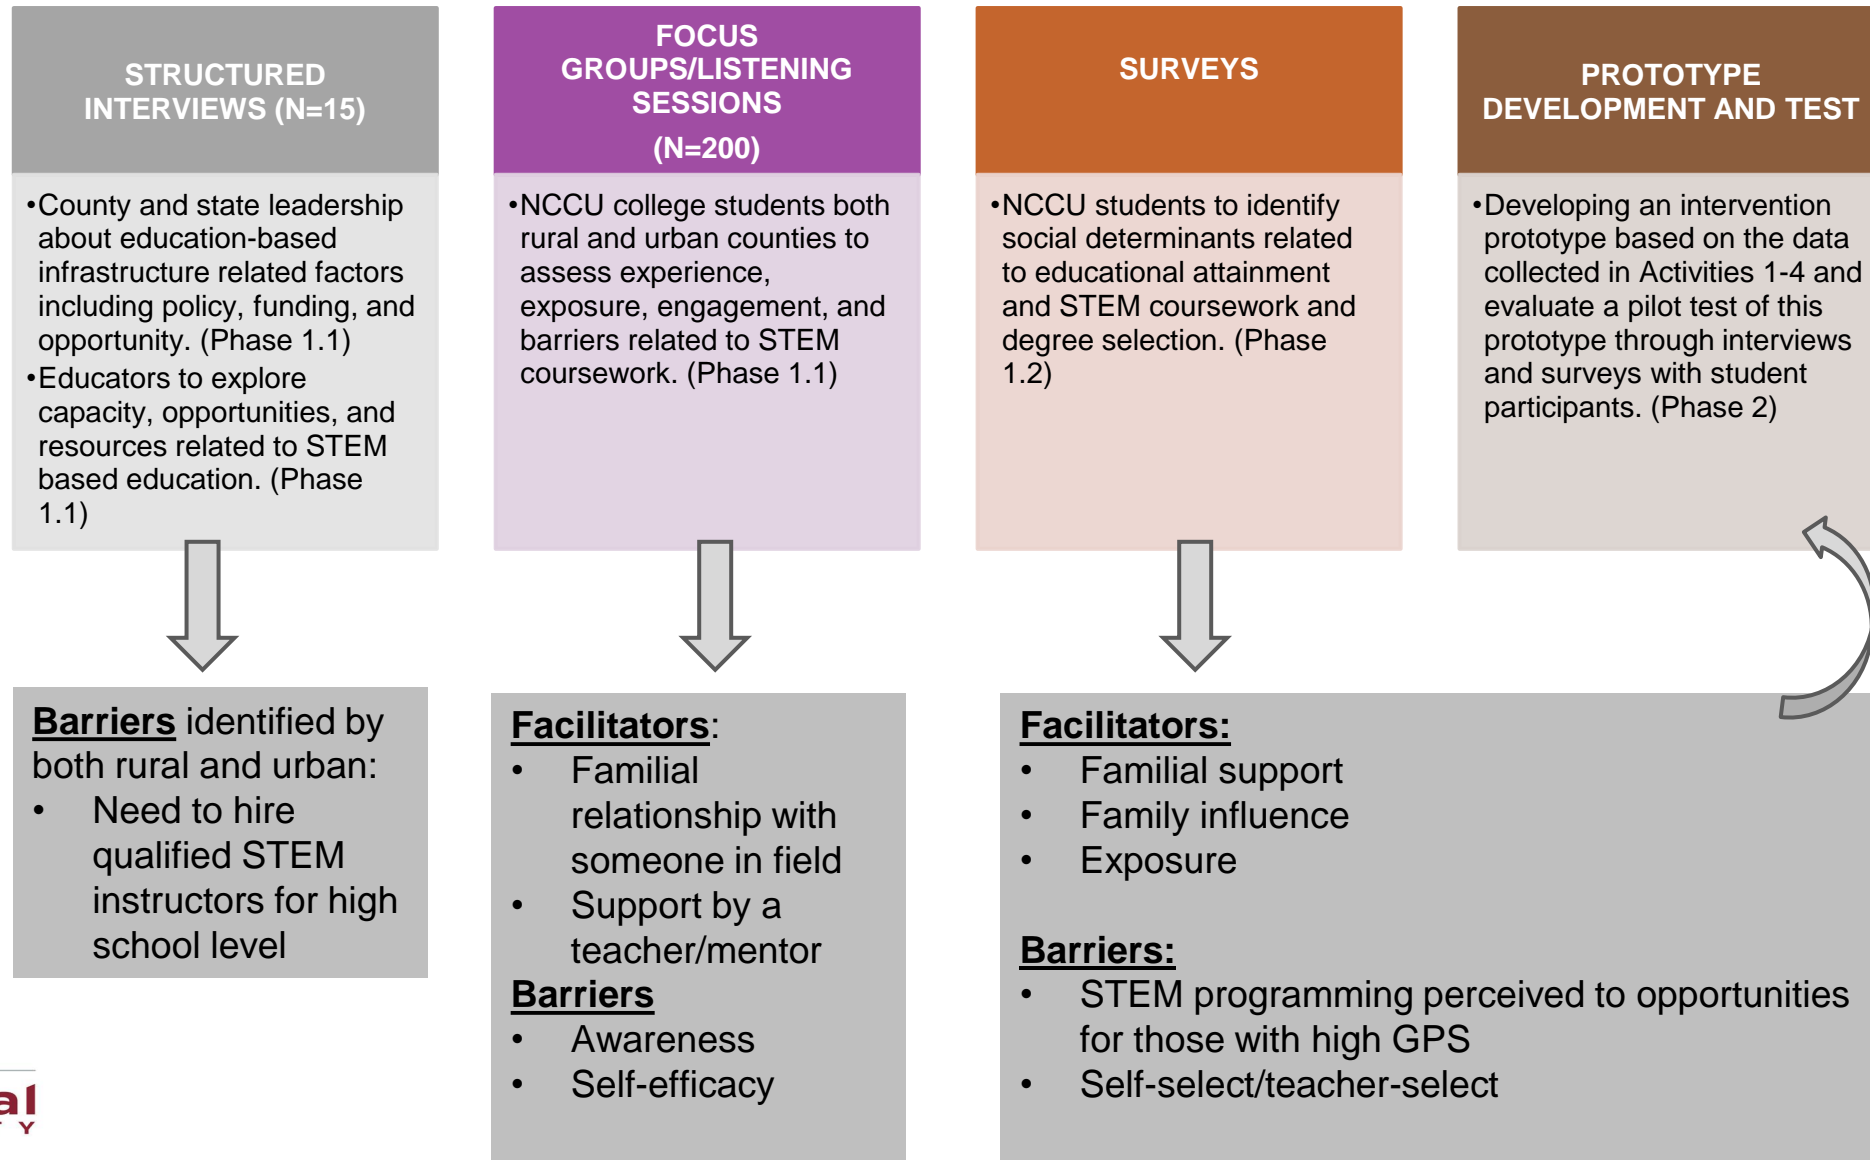

- NCCU students to identify social determinants related to educational attainment and STEM coursework and degree selection. (Phase 1.2)

## PROTOTYPE DEVELOPMENT AND TEST

- Developing an intervention prototype based on the data collected in Activities 1-4 and evaluate a pilot test of this prototype through interviews and surveys with student participants. (Phase 2)

# PRELIMINARY RESULTS

# PRELIM SURVEY RESULTS

- **Demographics**

- 82% 18-21 Years of Age
- 84% Black or AA/13% Hispanic or Latino
- 76% Female

- **High School STEM Opportunities**

- 41% Perceived that HS STEM-based opportunities were for students with top GPAs

- **College**

- 88% of families were “very/somewhat involved” in decision to choose NCCU
- 68% of families were “very/somewhat involved” in major selection

- **Choosing a major**

- 39% Chose a topic that they had a longstanding previous interest in
- 23% Chose a topic that they became interested in during high school
- 13% Chose based on potential salary
- 11% Chose a topic that came easy to them

# Project Goals

- Background
  - Military to civilian transition is difficult and often challenged further when a veteran must reintegrate into the civilian workforce
  - To support veteran reintegration, Congress signed into law the Supporting Veterans in STEM Careers Act in 2020
  - Only 7% of veterans nationally (and 3% in Illinois) are involved in an NSF-designated STEM occupation
  - Rural veterans are 50% less likely to be involved in a STEM occupation<sup>1</sup>
- Goals
  - Recruit rural-dwelling veteran students into a micro-credential focused on R Studio-based data science and machine learning
  - Make determinations about the unique educational preferences of this population to stimulate interest in STEM

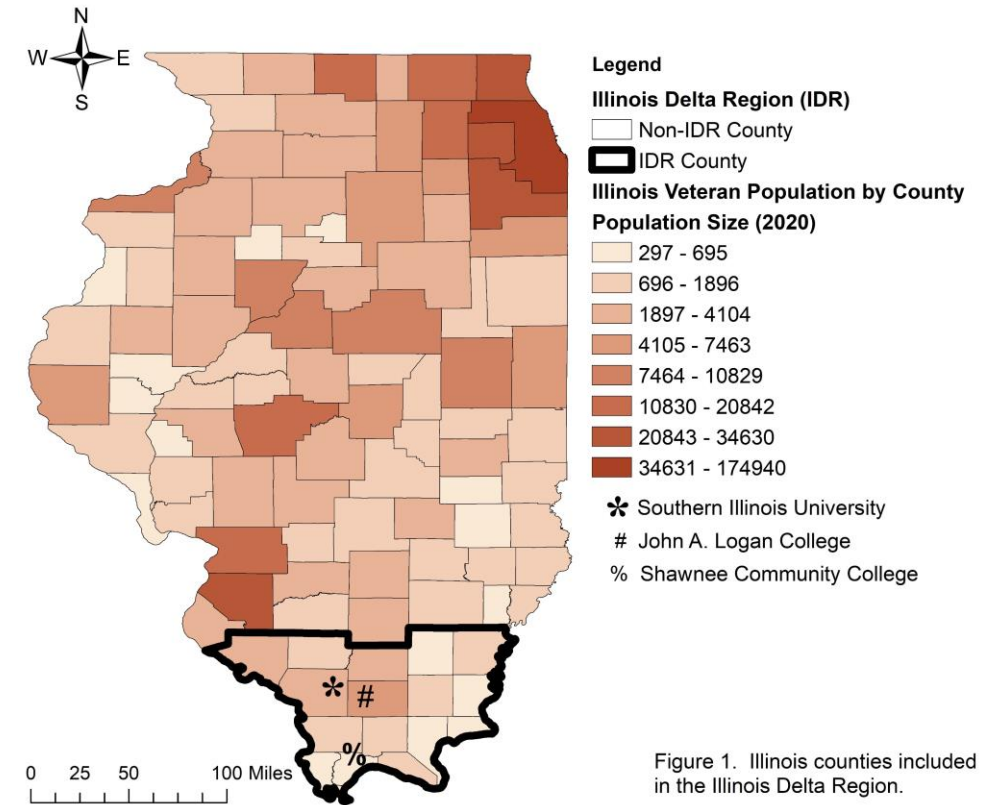

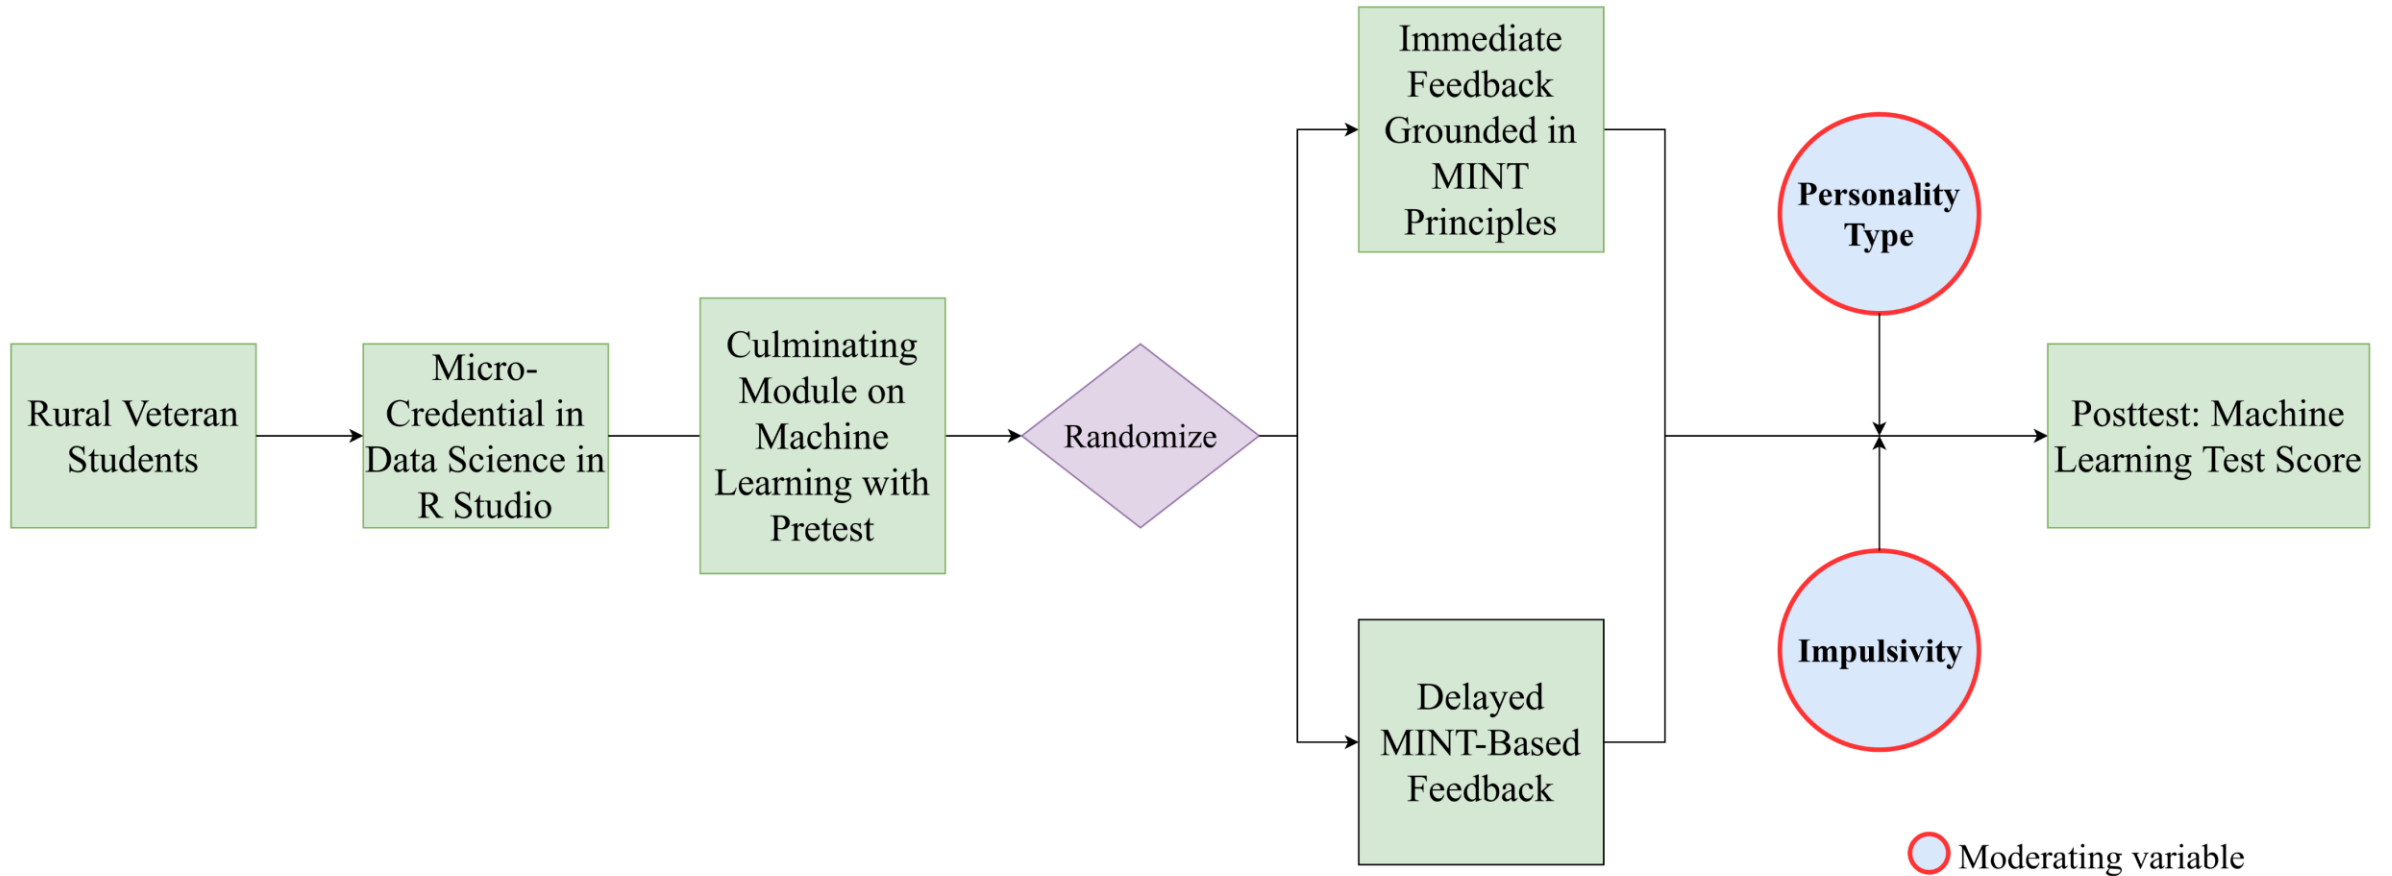

Figure 1. Illinois counties included in the Illinois Delta Region.

<sup>1</sup> McDaniel, J.T., et al. (2023). Rural military veterans of color and STEM occupational outcomes. Armed Forces and Society.

# Intellectual Merit

\* MINT = Motivational Interviewing

# Broader Impacts

- Creation of a sustainable STEM program tailored to the unique needs of rural veterans
  - Micro-Credential/Badge called “**M**achinE Learning Training for VETerans” (MELT-VET)
- Inclusion of a rural-dwelling military veteran graduate assistant from an underrepresented racial group in STEM

# Intellectual Merit: Building Rural STEM Education & Workforce Development Programs

- Utilize youth interests and rural assets (i.e., outdoor recreation) to “spark” STEM career aspirations & identity development in rural places
- Position youth as co-researchers or co-workers (provide incentives for their work); ensure family and peer involvement in programs/activities
- Use technology with **Universal Design for Learning** elements ([Bastoni et al., in press; Connected Science Learning](#))
- Understand the **benefits and constraints of schools and schooling** on rural youth STEM identity development (especially for rural boys)

# Broader Impacts in Rural America

*"I feel like my visions and overall look at life have improved since starting this project. I am more motivated, and I am thinking more about careers in STEM and outdoor recreation. This makes me wonder what my future will look like, and if it will look different now that I've done this project." - AISL participant*

- Enhance **community resources, mentoring, and infrastructure** for integrated STEM learning ecosystem in rural areas, including cultural ways of knowing STEM
- Develop **rural place-based STEM educational and workforce pathways** (career and technical education, apprenticeships, STEM workforce development)
- Support **psychosocial identity synthesis and future orientation** in rural places,; **reducing “stay vs. leave” dichotomy** that rural youth often experience in pursuing “good jobs”

---

**Intellectual Merit:** The overarching theory guiding this study is that EPPs that explicitly address the unique contexts of rurality may support recruitment, retention, and persistence in rural schools which can lead to a more diverse and effective STEM teaching force for rural schools. Research suggests that a consistent, well-prepared teacher force leads to greater student achievement.

**Broader Impact:** There is increasing evidence that teachers with thorough preparation are more likely to continue in the field. The broader impact of this collaborative research project will be a greater understanding of the programmatic features of educator preparation programs and Noyce programs that support rural STEM teacher persistence and retention.

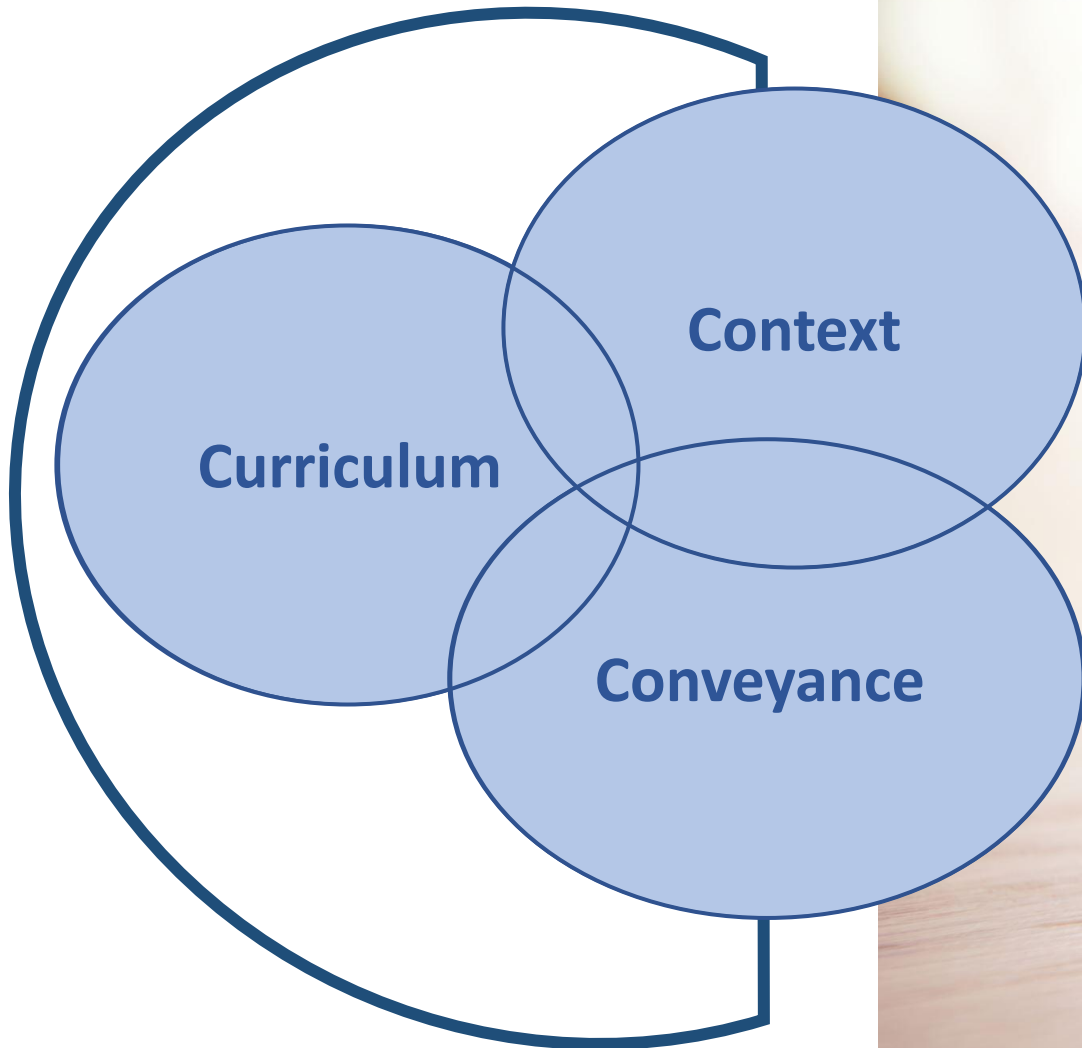

Goal: *Designed to better understand how STEM EPPs impact the decisions preservice teachers make regarding the geographic area in which they choose to start teaching and remain to teach throughout their careers.*

## TPR2: Research Questions

1. How do rural serving EPPs address rurality? What features of EPPs are intended to prepare program completers for employment as a STEM teacher in rural schools?
2. What programmatic features of the EPPs impact teacher candidates' intentions to teach STEM in rural schools? How do these programmatic features impact the teacher candidates' intentions?
3. What programmatic features of the EPPs impact program completers' decisions to accept their first teaching position in rural STEM classrooms? How do these programmatic features impact the teacher candidates' decisions?
4. What programmatic features of the EPP impact program completers' decisions to persist in teaching STEM at the same rural campus? In what ways do these features impact the teacher candidate's decisions and long-term plans to persist at the same rural campus?
5. What impacts program completers' retention, that is, their decisions to keep teaching STEM in (a) rural or (b) non-rural schools, but not necessarily at the same campus? In what ways do these features impact the teacher candidate's decisions to remain teaching STEM in (a) rural or (b) non-rural schools?

# Three C's Framework

## Preparing Pre-Service Teachers for Rural Schools

Amy Price Azano, Jayne Downey and Devon Brenner

<https://doi.org/10.1093/acrefore/9780190264093.013.274>

Published online: 23 May 2019

### Summary

Preparing pre-service teachers for rural schools has been a challenge in the field of education for more than a century, and issues specific to the rural teacher workforce remain a persistent and salient challenge in the United States and

# Conclusions after 3 years:

---

- Preservice teachers did not report that experiences in teacher education had a strong influence on their plans to teach in rural districts—for many because rural field experiences, assignments, and discussions were not a part of teacher preparation.
- For others because they already planned to teach in a rural place before beginning educator preparation or because they did not plan to teach in a rural area and did not change their minds during educator preparation. In fact, our data suggest that very little “rural” is happening in educator preparation.
- As more programs place a greater emphasis on explicit preparation for rural teaching positions, the Teacher Intention Survey may provide a useful tool for understanding how and if teachers’ intentions about where they might teach change over time and the influence of types of experiences in educator preparation on their intentions.
- We believe the TIS is a valid instrument that rural education scholars can use or adapt for future studies about beginning teachers’ intentions to teach in rural areas and their views of features of educator preparation.

Partnership of undergraduate STEM students, higher ed faculty, state policy experts, and industry leaders working to build a **Next Generation Appalachian economy** by doubling first-gen student success in Science, Technology, Engineering and Math.

The First2 Network is supported by the National Science Foundation under Award Numbers: HRD-1834601, Green Bank Observatory; HRD-1834575, Fairmont State University; HRD-1834586, Higher Education Policy Commission; HRD-1834595, High Rocks Educational Corporation; HRD-1834569, West Virginia University.

# College Readiness- Rurality & Opportunities:

Cluster 3: More rural; fewer cultural STEM opportunities.

Lack of civic facilities depresses AP credit and High School GPA which in turn depresses college GPA.

College GPA influences persistence

Cluster Map of Locales

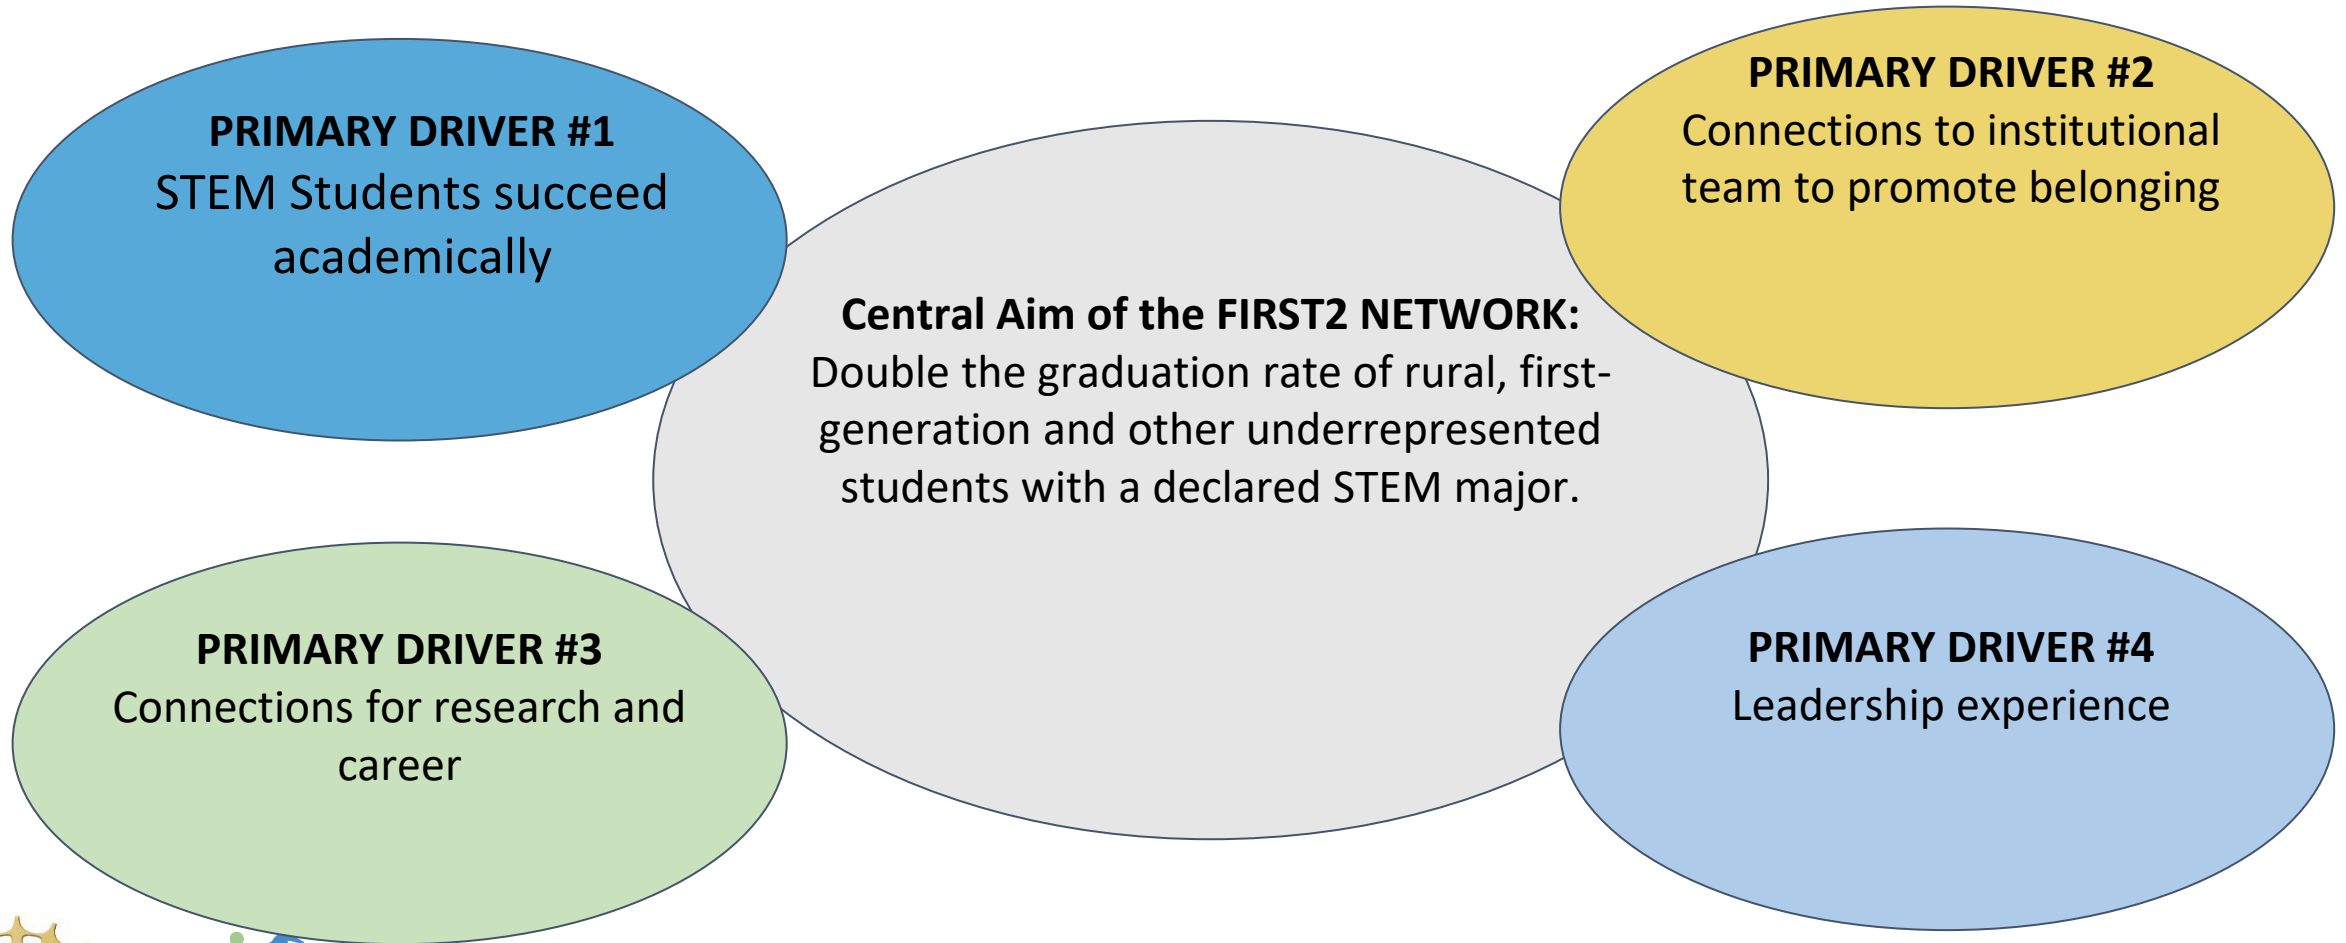

- - Cluster One
- - Cluster Two
- - Cluster Three

Source: diymaps.net (c)

# Networked Improvement Community

# Driver 3: Gaining workplace experience:

First2 summer research immersion data show a 67% persistence rate among the students who participated in the research experiences as compared to 27% 6-year graduation rate in the overall STEM student population.

The most important factors related to their motivation to remain STEM majors, as cited by students in surveys, were the research experience and/or hands on experience they received.

However: First-Gen Rural Undergraduate Students may not take research opportunities:

- more likely to work outside of school
- more likely to go home every weekend
- access to opportunities

## Session 3 Discussion Questions

1. For many research questions, the research setting isn't as important as what is being uncovered. However, for other research questions, the setting, itself, is critical. What research questions just simply need to be conducted in a rural or remote environment?
2. The translation of research findings into effective practice remains a priority of EDU. What information did you hear today that has compelling implications for STEM education practices for rural and remote communities?
3. What might EDU do to help increase the adoption of such research findings into practice, particularly in rural and remote communities?

# CHIPS + Science Act Rural Education

# NASEM Report: K-12 STEM Education and Workforce Development in Rural Areas

The 2022 CHIPS and Science Act directed NSF to support the National Academies in conducting a consensus study on preK-12 rural STEM education and workforce development

The National Academies of Science, Engineering, and Medicine (NASEM) committee sought to:

1. Evaluate the quality and quantity of current federal programming and research
2. Assess the impact that the scarcity of broadband connectivity in rural communities, and the affordability of broadband connectivity, have on STEM and technical literacy
3. Assess the core research and data needed to understand the challenges rural areas are facing, as well as the assets embedded in these communities;
4. Make recommendations for action at the federal, state, and local levels for improving STEM education; and
5. Make recommendations to inform the implementation of programs in sections 10512 (“National Science Foundation Rural STEM Activities”) and 10513 (“Opportunities for Online Education”), which include the National Science Foundation's funding for rural STEM activities and online STEM education and mentoring in rural communities.

# DRL "Rural" Educational Portfolio – Research Question Examples

In what ways do teachers apply learning from Indigenous STEM into their curricular and pedagogical choices?

What types of technology-driven and innovative learning experiences are effective in increasing rural, Black, and Latinx/Hispanic middle school students' AI interest, knowledge, skills, self-efficacy, and interest in AI careers?

What social roles do children and parents play in supporting each other's science learning and connections to rural communities?

Do storytelling and story-making serve as effective means for engaging middle-school students in computer science?

What instructional and mentoring strategies can be effectively integrated in to boost minority high school students' knowledge, interest, and attitudes towards STEM-related careers?

How can we create engaging AI learning experiences for diverse rural populations of middle school students through game design activities?

# Noyce Rural Strategy Exemplar

- Responsive to statute – US Code:
  - The term "high-need local educational agency (or high-need LEA)", as defined in section 201 of the Higher Education Act of 1965 (20 U.S.C. 1021), means a U.S. local educational agency (e.g., school district) that has at least one school that:
    - meets at least one of the following criteria:
      - not less than 20% of the children served by the agency are from low-income families;
      - serves at least 10,000 children from low-income families;
      - is eligible for funding under the Small, Rural School Achievement Program under 20 U.S.C. 7345(b); or
      - is eligible for funding under the Rural and Low-Income School Program under 20 U.S.C. 7351(b);
- Intentional outreach
- Cognizant of portfolio
- Recognizing the opportunity
- Understanding the community

# Directorate for STEM Education (EDU)

The U.S. National Science Foundation's Directorate for STEM Education works to develop a well-informed citizenry and a diverse and capable workforce of scientists, technicians, engineers, mathematicians and educators

**EDU Office of the  
Assistant Director  
(OAD)**

**Division of Graduate Education (DGE)**

**Division of Equity for Excellence in STEM (EES)**

**Division of Research on Learning in Formal and Informal  
Settings (DRL)**

**Division of Undergraduate Education (DUE)**

**Broadening Participation  
& Institutional Capacity**

**STEM Professional  
Workforce Development**

**STEM Learning and  
Learning Environments**

U.S. National Science Foundation  
Directorate for STEM Education

Preparing a diverse STEM workforce and a  
well-informed citizenry

# Division of Graduate Education (DGE) Rural Educational Portfolio

**JACQUELINE HUNTOON, PHD**

DIVISION DIRECTOR, DIVISION OF GRADUATE EDUCATION

EDU AC Meeting: May 29 – 30, 2024

# Division of Graduate Education (DGE)

**DGE Mission:** To enable and inspire an inclusive, equitable, and globally competitive U.S. STEM workforce by supporting students, research, scholarship, and innovations in graduate education.

**DGE Vision:** An inclusive, equitable, and globally competitive U.S. graduate education enterprise that advances STEM innovation, research, scholarship, diversity, and education.

UNIVERSITY.

## Programs Managed Primarily by DGE

**CyberCorps® Scholarship for Service Program (SFS)** Increase number and diversity of qualified cybersecurity professionals prepared to serve the cybersecurity mission of government. **Secure & Trustworthy Cyberspace, Education (SaTC EDU)** Advance research on cybersecurity learning, pedagogy, equity, and inclusion.

**Graduate Research Fellowship Program (GRFP)** Support outstanding graduate students as they prepare to serve as the nation's future STEM scholars and leaders.

**NSF Research Traineeship Program (NRT)** Prepare diverse cohorts for a range of careers in high-priority interdisciplinary or convergent research areas. **Innovations in Graduate Education Program (IGE)** Encourage bold and potentially transformative approaches to STEM graduate education and training.

**STEM Education Postdoctoral Research Fellowships (STEM Ed PRF) Program** Build capacity to conduct STEM education research by funding early-career scholars.

## Others Contributed to by DGE

**EDU Core Research (ECR:Core) + EDU Core Research: Building Capacity in STEM Education Research (ECR:BCSER)**

**Racial Equity in STEM Education (EDU Racial Equity)**

# DGE Rural Portfolio – *Overview*

DGE currently supports **50 active projects** with rural as a topic, within a rural (nonmetro) locale, or both (i.e., rural as a topic *and* within a rural locale). This is **out of a total of 511 active awards**. **GRFP was excluded** from the analysis because the fellowships are portable.

# Division of Graduate Education (DGE)

## Investments in nonmetro locales and/or on rural topics

# SFS Example

**NSF Award #1921726**

Dakota State University Madison,  
SD

This Cybercorps<sup>®</sup> SFS program has  
had a 100% job placement rate for  
graduates.

# Questions?

U.S. National Science Foundation  
Directorate for STEM Education

Preparing a diverse STEM workforce and a  
well-informed citizenry

## Session 5 Discussion Questions

1. In thinking about this session, what is the most notable?
2. Is there anything you were hoping to hear but didn't?
3. Earlier, you were asked what "success" would look like in Rural STEM Education and Workforce Development, has that definition changed over the last five sessions? Please clarify.

# SESSION 6: Pulling it all Together to Unleash Opportunities in STEM Education

U.S. National Science Foundation  
Directorate for STEM Education

Preparing a diverse STEM workforce and a well-informed citizenry

## Session 6 Discussion Questions

1. What are some common themes you heard regarding approaches to Rural STEM Education and Workforce Development?
2. As we think about creating opportunities everywhere, are there any unique approaches that EDU might want to consider when engaging and advancing STEM Education in rural and remote environments?
3. Given what you heard in your breakout groups and in this discussion, what recommendations for prioritizing efforts could you provide?

# Preparation for Meeting with NSF Chief Operating Officer 11:30 a.m. – 12:00 noon
